

**PERFOREX One™
Benefits:**

- Links performance reporting to action planning
- Allows consistent reporting between areas or operations
- Gives instant and remote access to performance information and action plan status at all levels

Information Technology Supporting Effective Execution

PERFOREX One is a web-based software program designed to meet all of your operational reporting needs. The application is a repository for all of your data, which is then used to generate actionable information. In just a few clicks, this information can be reviewed by the shop floor all the way up to the executive offices. Imagine reviewing all key performance indicators plant-wide, or even across multiple sites, on one report, in real time, right from your desk. Then being able to drill down into as much detail as you want, including a link to the specific actions in place to address variances from targeted performance levels. That's what PERFOREX One delivers.

KPI Report

Created by Perforex
Generated on 5/9/2007 at 10:26
For the Day of 4/23/2007

	Shift		Total	Prior Period	Baseline	Improvement Over Baseline	Action Plans
	Day	Night
